CSI-SORT

CSI-SORT is the complete sort package for z/VSE.

- Great for the basic requirements of a sort package at a lower cost
- Provides compatibility for all DFSORT commands
- Activate by including the CSI-SORT library in front of your current sort product's library. Since parameters are used or ignored, no JCL changes are required.
- Ask us about Data-Miner, or use OUTFIL or E35 exit, for more extensive formatting
- Offers better performance for internal sorts without changing your applications
- Features support for FIELDS=COPY and MERGE
- All sorts are performed in your choice of data space or partition GETVIS
- Involves smaller partition requirements when data space area is used
- Interfaces for calls both from JCL (external) and from applications (internal)
- A work file is used only if data exceeds allocated space
- MERGE is treated like a sort without any arguments, allowing for one code path to improve performance and reduce complexity
- Formatted output (OUTREC) is available and behaves like INREC
- Support for tape and disk (including VSAM)
- Support for E15, E32, and E35 exits
- Support for INPFIL and OUTFIL exits
- Support for reader input, and punch or print output
- Full support for INCLUDE, OMIT, INREC, and SUM
